

Stem Cell Treatments for Inflammatory & Traumatic Diseases

Our pets make our lives better in many ways, but did you know that veterinary clinical trials are being done to inform human health? Join us for a presentation on how stem cells function to heal tissues in animals and people, with an emphasis on the current veterinary clinical trials using stem cells to treat inflammation and spinal cord injury in small and large companion animals. Speaker Doris Borjesson is a veterinarian and Professor at the UC Davis School of Veterinary Medicine, specializing in regenerative medicine and stem cell therapy.
