

TAHOE:
STATE
OF THE
LAKE
REPORT
2012

A PORTION OF THE FUNDING USED TO ASSEMBLE AND DISTRIBUTE
THIS REPORT WAS PROVIDED BY THE CALIFORNIA TAHOE CONSERVANCY

CONTENTS

1. Introduction

2. Executive Summary

3. About Lake Tahoe

4. About the UC Davis Tahoe Environmental Research Center

5. Map of Tahoe Basin data collection sites

6. Recent Research Updates

- 6.1 Overview
- 6.2 Lake Physics: Lake Tahoe color
- 6.3 Lake Physics: Gyres within Lake Tahoe
- 6.4 Lake Physics: Gyres within Lake Tahoe, continued
- 6.5 Aquatic Invasive Species: Asian clams large-scale experiment
- 6.6 Aquatic Invasive Species: Asian clams in Emerald Bay
- 6.7 Aquatic Invasive Species: Asian clams in Emerald Bay, continued
- 6.8 Aquatic Invasive Species: Boats in Emerald Bay
- 6.9 Biology: Desired conditions for shoreline algae
- 6.10 Biology: Time series for shoreline algae
- 6.11 Angora Fire: Stream water quality
- 6.12 Forest Health: Tree mortality
- 6.13 Forest Health: Tree mortality, continued

7. Meteorology

- 7.1 Air temperature (daily since 1911)
- 7.2 Below-freezing air temperatures (yearly since 1910)
- 7.3 Monthly air temperature (since 1998)
- 7.4 Daily solar radiation (daily in 2011)
- 7.5 Annual precipitation (yearly since 1910)
- 7.6 Monthly precipitation (2009, 2010, 2011 and 1910 to 2011 average)
- 7.7 Snow as a fraction of annual precipitation (yearly since 1910)
- 7.8 Shift in snowmelt timing (yearly since 1961)

8. Physical properties

- 8.1 Lake surface level (daily since 1900)
- 8.2 Lake surface level (daily since 2009)
- 8.3 Surface water temperature (yearly since 1968)
- 8.4 Maximum daily surface water temperature (since 1999)
- 8.5 July average surface water temperature (since 1999)
- 8.6 Water temperature profile (in 2011)
- 8.7 Lake stability (since 1968)
- 8.8 Stratified season length (since 1968)
- 8.9 Depth of mixing (yearly since 1973)
- 8.10 Mean daily streamflow of Upper Truckee vs. Truckee River (in 2011)
- 8.11 Annual discharge volume of Upper Truckee and Truckee River (since 1980)

9. Nutrients and particles

- 9.1 Sources of clarity-reducing pollutants
- 9.2 Pollutant loads from 10 watersheds
- 9.3 Nitrogen contribution by Upper Truckee River (since 1989)
- 9.4 Phosphorus contribution by Upper Truckee River (since 1989)
- 9.5 Suspended sediment contribution by Upper Truckee River (since 1989)
- 9.6 Nutrient concentrations in rain and snow (yearly since 1981)
- 9.7 Nutrient loads in rain and snow (yearly since 1981)
- 9.8 Lake nitrate concentration (yearly since 1980)
- 9.9 Lake phosphorus concentration (yearly since 1980)

10. Biology

- 10.1 Algae growth (primary productivity) (yearly since 1959)
- 10.2 Algae abundance (yearly since 1984)
- 10.3 Algae concentration by depth (in 2011)
- 10.4 Annual distribution of algal groups (yearly since 1982)
- 10.5 Algal groups as a fraction of total population (monthly in 2011)
- 10.6 Nutrient limitation of algal growth (2002 - 2011)

(CONTINUED ON NEXT PAGE)

CONTENTS, CONTINUED

- 10.7 Photosynthetically active radiation (in 2011)
- 10.8 Predominance of *Cyclotella* sp. (2002 - 2011)
- 10.9 Shoreline algae populations (yearly since 2000)
- 10.10 Shoreline algae distribution (in 2011)

11. Clarity

- 11.1 Annual average Secchi depth (yearly since 1968)
- 11.2 Winter Secchi depth (yearly since 1968)
- 11.3 Summer Secchi depth (yearly since 1968)
- 11.4 Light transmission (in 2011)

12. Education and outreach

- 12.1 TERC education and outreach (in 2011)
- 12.2 TERC education exhibits
- 12.3 TERC education programs
- 12.4 TERC special events

INTRODUCTION

The University of California, Davis, has conducted continuous monitoring of Lake Tahoe since 1968, amassing a unique record of change for one of the world's most beautiful and vulnerable lakes.

In the UC Davis Tahoe: State of the Lake Report, we summarize how natural variability, long term change and human activity have affected the lake's clarity, physics, chemistry and biology over that period. We also present the data collected in 2011. The data shown reveal a unique record of trends and patterns – the result of natural forces and human actions that operate at time scales ranging from days to decades. These patterns tell us that Lake Tahoe is a complex ecosystem, behaving in ways we don't always expect. This was never truer than in this last year where despite a very wet winter, clarity improved markedly over the previous year. While Lake Tahoe is unique, the forces and processes that shape it are the same as those acting in all natural ecosystems. As such, Lake Tahoe is an analog for other systems both in the western U.S. and worldwide.

Our role is to explore this complexity and to use our advancing knowledge to suggest options for ecosystem restoration and management. Choosing among those options and implementing them is the role of those outside the scientific

community and needs to take account of a host of other considerations. This annual report is intended to inform non-scientists about the most important variables that affect lake health. Until recently, only one indicator of Lake Tahoe's health status was widely used: the annual clarity (often called the Secchi depth, after the instrument used to collect the clarity data). In this report we publish many other environmental and water quality factors that all provide indicators of the lake's condition.

This report sets the context for understanding the changes that are seen from year to year and those that are observed over a time scale of decades: Was Lake Tahoe warmer or cooler than the historical record last year? Are the inputs of algal nutrients to the lake declining? How much are invasive species affecting Lake Tahoe? And, of course, how do all these changes affect the lake's famous clarity?

The data we present are the result of efforts by a great many scientists, students and technicians who have worked at Lake Tahoe throughout the decades since sampling commenced. I would, however, like to acknowledge (in alphabetical order) the contributions of Veronica Alumbaugh, Brant Allen, Nancy Alvarez, Patty Arneson, Sudeep Chandra, Bob Coats, Kristin Fauria, Bill

Fleenor, Alex Forrest, Allison Gamble, Alfredo Gimenez, Charles Goldman, Scott Hackley, Tina Hammell, Alan Heyvaert, Simon Hook, Andrea Hoyer, Debbie Hunter, Peter Hunter, Emily Iskin, Camille Jensen, Anne Liston, George Malyj, Dan Nover, Kristin Reardon, John Reuter, Bob Richards, Dave Rizzo, Heather Segale, Steve Sesma, Nicole Shaw, Todd Steissberg, Collin Strassenburgh, Raph Townsend, Katie Webb and Monika Winder, to this year's report.

Funding for the actual data collection and analysis comes from many sources. While many additional water quality variables could be tracked, funding ultimately limits what we measure. Current funding for the long-term monitoring and analysis is provided by the Lahontan Regional Water Quality Control Board, the Tahoe Regional Planning Agency, the U.S. Forest Service, the U.S. Geological Survey and UC Davis. Our monitoring is frequently done in collaboration with other research institutions and agencies. We are grateful for the participation of our colleagues in the Tahoe Science Consortium. In particular we would like to acknowledge the U.S. Geological Survey (USGS), the Desert Research Institute (DRI), the University of Nevada, Reno (UNR), the National Aeronautics and Space Administration (NASA), and the U.S.

Forest Service. Some data are also collected as part of research projects funded through a variety of sources. Without these data there are many questions that could not even be asked let alone answered.

This year we are presenting updates on some recent research, as well as providing updates on the lake monitoring efforts. These new research results highlight some of the most exciting findings of work that is still in progress, and will be reported on fully in the months and years to come.

Part of the cost for the production of Tahoe: State of the Lake Report this year was provided through funding by the California Tahoe Conservancy. We gratefully acknowledge that funding.

Sincerely,

Geoffrey Schladow, director
